Technology Project Phase B

When creating the website, I resolved challenges with previous databases, especially the difficulty navigating to the checkout page. To address this, I made the funneling page prominent and directly linked the tickets page to the checkout page. This optimized the checkout process, making it straightforward and accessible for users. Building on these navigation improvements, I turned next to data analysis for further refinement.

One of the first steps in the redesign was reviewing the data in our database. I mapped the user journey from the homepage to the final purchase confirmation. Through this process, I identified where users were dropping off and how many lost interest at each stage. The data showed that the checkout page was buried too deep within the site and required too many clicks to reach. Identifying this problem became the main focus of my website's creation.

I ensured that people could easily buy tickets with just three clicks. To buy tickets, they just had to click the tickets category, pick the time they wanted, and choose the number. Users then went straight to checkout. This streamlined funneling process made it flawless and easy to follow. It also lowered the chance of falloff during the purchase.

In addition to navigation improvements, I updated the visual design of the checkout page. I used flexbox and CSS grid to make my code easy to read and to reduce clutter on the page. This applied to my HTML, CSS, and JavaScript files as well. As a result, the website was easy to understand on both mobile and computer versions. I also used a nav bar and highlighted buttons to show users what they would select if they pressed that button.

To access the checkout page, I made sure people had to go through tickets to reach checkout because I don’t understand how they would get there if they didn’t select which tickets they wanted in Buy Tickets. I also ensured that when you hovered over "Buy Tickets," it would turn green. I also made sure that when you click a button it removes it off the screen to lower the amount of clutter that is there.

Testing played a critical role throughout the development process. I ran usability tests with a small group of users to gather feedback on the new layout before finalizing the design. Their input led to several additional refinements, including adjusting button

placement and improving the mobile responsiveness of the checkout flow. Incorporating real user feedback ensured that the final product was both functional and intuitive. Building on this feedback, I conducted additional tests for a more detailed evaluation.

To test whether the redesign fit well, I went through the ticket funneling process multiple times on desktop and mobile. I then asked friends and others to use the website I created. I observed whether the navigation and checkout processes were understandable to them. The feedback helped me confirm users knew how to go from the home page to the tickets page and then to checkout without confusion. Afterward, I tested the buttons, the navigation bar, and highlighted selections to ensure each interactive feature worked. This helped guide users throughout the process. In addition, I checked that the layout stayed organized and understandable at different screen sizes. This showed that the flexbox and CSS grid improved my website. The specific testing confirmed that the Monomuse website now has fewer barriers in the checkout funnel, creating a smoother, more reliable experience.

Overall, the redesigned website represents a significant improvement over the previous version. By focusing on the user experience and removing unnecessary barriers in the checkout process, the site is now better equipped to convert visitors into customers. The changes made during this project demonstrate the importance of combining thoughtful design with data-driven insights to create a more effective, user-friendly platform.

Mission Statement

At Monomuse, our mission is to celebrate the written word by preserving, showcasing, and sharing the world's most remarkable books and literary works — ensuring every story, no matter how rare or forgotten, finds its audience.

Milestones

- 1990: Monomuse founded by a group of book enthusiasts with a vision to create a unique museum experience.
- 2020: Monomuse founded with a collection of 10,000 books.
- 2021: First public exhibition, "The Lost Classics," attracts 50,000 visitors.
- 2022: Launch of the "Rare Reads" digital archive, making 5,000 rare books accessible online.
- 2023: Partnership with local schools to promote literacy and book appreciation among students.

Welcome To The Monomuse Museum

MonoMuse is a contemporary museum dedicated to exploring the world of books and storytelling, and how they shape human creativity and culture. Through immersive exhibitions, interactive displays, and rotating collections, MonoMuse invites visitors to discover the power of literature—from classic works to modern voices—and how stories influence the way we think, imagine, and connect. Whether you are a first-time visitor or a returning guest, our exhibitions offer fresh perspectives on the impact of books in everyday life. Plan your visit to experience engaging literary exhibits, hands-on activities, and events designed to inspire a love for reading and storytelling.

Buy Tickets

MonoMuse brings visitors into a world of books, storytelling, and imagination through immersive exhibits and literary experiences.

At MonoMuse, we go beyond simply displaying books. Our exhibits are designed to help visitors experience literature in new ways through interactive environments, themed collections, and creative installations. From timeless classics to modern works, we celebrate the stories that shape culture, inspire curiosity, and connect people across generations.
